## Alaska Gas Corporation

**"An Act establishing the Alaska Gas Corporation, a public corporation, and providing for its structure, management, responsibilities, and operation, and requiring the development of a project plan to evaluate whether construction and operation of a natural gas transmission pipeline project by the corporation is feasible."**

[Article VIII, Section 2](#) of the Constitution of the State of Alaska specifies that, “the legislature shall provide for the utilization, development, and conservation of all natural resources belonging to the State, including land and waters, for the maximum benefit of its people.” For many years, the State of Alaska has relied heavily on the production of oil to foster its livelihood, provide opportunities for its people, and generate revenues to ensure continued prosperity. We have all seen and enjoyed the positive effects of oil development. However, oil price fluctuations and reduced competition resulting in reduced production have adversely affected the State’s ability to provide a secure economic future. As we face an enormous budget deficit, we must look beyond our reliance on oil production, budget cutting, and taxation as the only means of ensuring a long-term fiscal solution. It is incumbent upon the leaders of this state to recognize that further resource development is critical in order to secure an additional and substantial revenue stream to the State of Alaska. Conservatively, 100 trillion cubic feet of natural gas is stranded on the North Slope, and the failure to recognize this vital resource as a valuable commodity is in direct conflict with the provisions of the Constitution of the State of Alaska.

In order to facilitate the extraction and sale of natural gas, House Bill 302 establishes the Alaska Gas Corporation. The prime responsibility of the corporation is to provide for a basic commodity transportation system: a natural gas pipeline system; open to all potential competitors, and open to all realistic market access opportunities.

Overcoming a number of impediments is essential in order for a project of this nature to become a reality. We have extensively studied the economics, market viability, financial needs, and regulatory obstacles associated with the construction and operation of this project. However, in order to truly understand the economic viability of the Alaska Gas Corporation, we must turn to professionals in the engineering, financial and market sectors in order to establish absolute economic feasibility, and an associated project plan.

[House Bill 302](#) requires a natural gas pipeline feasibility study and plan be completed and presented to the twenty-third Alaska State Legislature and the Governor. This report shall contain specific information pertaining to technical, financial, regulatory and market access matters relating to the project. The passage of HB 302 is of paramount importance in order to move forward and develop our natural resources in the maximum best interest of the citizens of the State of Alaska.
